

Shivam Rawat

Software Engineer — Frontend Engineer

shivamrawat06994@gmail.com — +91-639 624 7987 — LinkedIn — GitHub — Portfolio

Summary

Software Engineer with a strong focus on React and JavaScript, experienced in building modern web applications across frontend and backend systems. Strong in frontend architecture, performance optimization, complex application workflows, authentication, API integration, and end-to-end feature development, with experience across enterprise platforms and technically complex product experiences.

Experience

ProsperaSoft

2023 – Present

Software Engineer

- Build and evolve Continuum, an enterprise data governance platform, owning features end-to-end across frontend and backend while translating complex requirements into maintainable product experiences.
- Led feature development across a small engineering team by coordinating implementation, helping unblock technical issues, and contributing to feature delivery across complex governance workflows.
- Improved application responsiveness by optimizing frontend data flows, reducing unnecessary API activity through debouncing and efficient request handling, and improving reusable frontend patterns.
- Built enterprise workflows covering governance insights, audits, retention, configuration, permissions, and authentication/SSO, including Okta integration and supporting API/backend requirements.

Masala Games

2022

Frontend Developer

- Built React and TypeScript experiences for *alive.house*, a Web3 music and metaverse platform combining a web application with an interactive Unity-powered 3D environment.
- Integrated Unity with React using React Unity WebGL, creating a seamless experience between traditional web interfaces and immersive 3D environments while addressing frontend performance challenges.
- Contributed to Web3, blockchain, and NFT functionality, including OpenSea integration, while working with technologies such as Unity and Solidity early in my career.

Projects

Continuum – Data Governance Platform | React, Next.js, TypeScript

- Built a centralized management layer around the BigID ecosystem, simplifying complex data governance workflows through an intuitive interface supporting insights, audits, retention, configuration, and role-based access.
- Focused on reusable frontend architecture, efficient data fetching, performance optimization, and operational workflows including Jira-based support processes.

alive.house – Web3 Music & Metaverse Experience | React, TypeScript, Unity

- Created an interactive music experience where users could enter shared 3D environments, explore, interact with others, use emotes, and experience artist-driven content.
- Connected React and Unity through React Unity WebGL and contributed to Web3/NFT functionality, including OpenSea-based digital asset interactions.

Technical Skills

Languages: JavaScript, TypeScript, Python, HTML5, CSS3

Frontend: React, Next.js, Redux, Tailwind CSS, Material UI, React Native

Backend: Node.js, Express.js, MongoDB, REST APIs, Webhooks

Engineering: Frontend System Design, Backend System Design, Data Structures & Algorithms, Performance Optimization

Infrastructure & Tools: Docker, AWS, Vercel, Git, GitHub, CI/CD

Specialized: SSO, Okta, React Unity WebGL, Unity, Web3, Blockchain, Solidity, OpenSea

Education

Amity University Noida

Bachelor of Computer Applications (BCA)
